1. Introduction

Only 20-30 years ago, you had to go to libraries, fill out forms and search for information manually among thousands of books. But the world has changed and now you got all this on your phone, as well as YouTube, other social networks and personal assistants on your device!

Do you agree that it's insanely cool - we live in a fantasy, a dream come true of people from the past, a dream that turned out to be real and now we can create our own fantastic worlds right on the screens of our devices. One of these fantastic stories is being created right now and we want to share this amazing space journey with you.
QUASAR is an economic Play to Earn strategy game, where you can become the captain of your own long-distance ship and discover new planets by completing strategic tasks, extracting resources and upgrading your hero. All this will let you earn a digital currency that has a real value in the cryptocurrency market!

The success and quality of the game is guaranteed by a team of professionals working on this idea. Experts from different fields: Blockchain, DeFi, NFT Art and Game development have teamed up to launch the first Play-to-Earn NFT Metaverse RPG Game.

Ready to go to the QUASAR universe? Let's go!
2. Market Analysis

We have made market analysis, played and studied other Play-to-Earn games to confirm our confidence in QUASAR Metaverse. The growing popularity of cryptocurrencies, profitability and high consumer capacity ensure the constant growth of this industry. Records for the number of searches in google about cryptocurrency and the NFT sphere are a confirmation of people's interest in this topic.

More and more people around the world are using cryptocurrency in transactions with each other, many companies work on blockchain technology, they create their own NFT and acquire assets for tokens. Mention of cryptocurrencies can already be found in films and books, and in the news feed of official media you can often hear about Bitcoin. The wolves of Wall Street could not have imagined that Bitcoin and Ethereum would become one of the most profitable assets in the history of the financial market.
It is important to note the huge interest in products with non-fungible tokens (NFT) among investors and private collectors who are ready to put tens of millions of dollars in these projects. There are unique NFT sold for record amounts at auctions such as Sotheby's.

According to dappradar.com, the total market capitalization of NFT as of Dec 2021 is more than $400M. The number of collaborations with popular brands, such as Jimmy Choo and D&G, and even the NBA sports leagues is growing.

The gaming industry puts a lot of emphasis on NFT in its projects, for example GameFi, which experienced rapid growth in 2021. Millions of people play blockchain-based games with capitalization exceeding millions of dollars. QUASAR Metaverse will take its market share in the field of GameFi, thanks to its qualities that are absent from the rest.
The cryptocurrency industry creates opportunities to triple your profits or more. There is a positive growth dynamics of blockchain users and those who want to use decentralized finance (DeFi). It attracts more and more people on the internet to invest their funds in various DeFi projects. Investors contribute billions of dollars to generate large over the counter profits.

The capitalization of Ethereum has already exceeded $500 billions, and PancakeSwap is $3.5 billions. Quasar Token will be traded on the PancakeSwap DEX platform.
3. Complexities of the Industry

After analyzing the market and studying competitors, a number of difficulties are revealed, which, for some people, creates a feeling of distrust of modern technologies and the Internet.

We are talking about cases of fraud in the Internet sector, financial pyramids and online casinos, negative news about which undermines the credibility of the industry and reduces the interest of participants. Cryptocurrency wallets are also a target for dishonest individuals. However, thanks to blockchain technology and multi-level security settings, the cryptocurrency sector is protected from unauthorized hacking only if the user himself has transferred his credentials to third parties.
WIDE VARIABILITY FOR PLAYER INTERACTION

The game is a community of like-minded people who have fun, earn tokens and develop entrepreneurial skills. The ability to establish contacts in QUASAR Metaverse ensures the retention of players and helps attract new users. Players can interact with each other economically and build a development strategy together.
GameFi TECHNOLOGY

Currently presented games in the GameFi industry cannot meet the needs of most players. Gamers who are used to a high-quality picture, an interesting plot and well-developed physics of the game are not ready to switch to games that cannot satisfy their desires yet. The slow updating of existing projects also pushes players away from supporting the platform further. Many classic computer games have been developed over the years by a large group of specialists and engineers in order to reach the level for which games are chosen by millions of gamers around the world. It takes time for a project to appear in the world of NFT games that millions will play. QUASAR Metaverse took into account the wishes of gamers to become a hit in the GameFi world.
4. Basic Information about QUASAR Metaverse

QUASAR Metaverse is an economic strategy. The game is designed with Play-to-Earn technology, which allows players to own in-game assets and increase their value during the game. In this way, users create value for themselves, other players and developers. By completing game tasks, extracting resources and upgrading your hero, you earn a digital coin (token) that has a real value on the cryptocurrency market. To do this you don't have to dive into the world of NFT and GameFi. Just play what you like.

The goal of the project is to become a leader in its genre of "Play to earn". The player will need a number of qualities - mathematical abilities, the use of life strategies, and the ability to quickly navigate in various situations.
5. Economic model of QUASAR Metaverse

To create a fair and profitable system that allows players to earn money and enjoy the process, it was extremely important for us to create the right and high-quality integration strategy for the internal gaming system. Quasar token are integrated into all game processes and play an important role in the project.

Economic incentives are designed in a such way that players spend a long time in the game and are motivated by the possibility of earning income.

By participating in the game, person learns a lot, including entrepreneurial skills.
Token Info

- Name: Quasar
- Symbol: QUASAR
- Total supply: 100,000,000
- Chain: Binance Smart Chain
- Initial price: 0.10$

QUASAR NFT

In the marketplace users can access QUASAR Captain NFT - an image of the game character and QUASAR Metaverse NFT - it’s a limited series featuring unique planets, stars, nebulae and secret objects. The owner of which receives passive income from their ownership during the gaming session.

Also QUASAR Captain NFT can be rented to other users for one game session.
TECHNICAL FEATURES
In the process of implementing the project as a whole, the latest technologies and experience of the gaming industry were used. It was this symbiosis that allowed us to create a high-quality product with complex visual elements, accessible to every user.

BLOCKCHAIN and distributed registry technology play an important role in the implementation of the project. The financial architecture built on blockchain technology ensures the interaction between tokens, economic processes and the exchange of values. Based on the blockchain, game items can be presented in the form of unique non-fungible tokens (NFT), gamers can become the actual owners of in-game assets. In-game processes and synchronization with the user's wallet would be impossible without creating a blockchain-based architecture.
WEB 3.0
The concept focused on the development of Internet technologies through the use of blockchain technology.

To use Web 3.0, you do not need to install any application on the device. Web 3.0 can be used on most common browsers, devices, and operating systems, making it accessible to all types of users. Billions of people around the world have the opportunity to access Web 3.0 technology, which is distinguished by the quality and complexity of visual elements. In fact, no HTML or CSS methods are capable of reaching the same level.
6. Advantages of QUASAR Metaverse

QUASAR is a platform that provides an opportunity to earn real money, become financially literate and acquire new skills.

The project is able to influence various aspects of the modern world. It can not only take a leading position in the gaming industry, but also become a revolutionary product in the blockchain, DeFi and GameFi sectors.
STRONG ECONOMIC MODEL

The purpose of numerous schemes and principles of the economic model was to create positive incentives for the in-game currency and encourage players to keep it. The player's gaming assets acquire value over time, which makes their early sale ineffective and impractical. The mechanics of the project are built in such a way that every player who devotes time to the game will be able to earn money. There are projects on the market that implement a combination of DeFi and GameFi, but they are all inferior to Quasar Metaverse. Some of them, for example, specialize in only one type of activity and do not cover all the opportunities that blockchain and modern technologies open up for gaming companies.
EXCELLENT CONTENT QUALITY AND THOUGHTFUL USER INTERFACE

Currently, a team of more than fifty people is working on the project, consisting of creative producers, software developers and designers. The team is working with special care to create a high-quality and exciting game comparable to those produced by industry leaders with a capitalization of billions of dollars. You won't be able to tell the difference.

The game is made even more interesting by different variations of interactions between players who can not only compete, but also join forces to achieve goals.
ACCESSIBILITY AND EASE OF MARKET ENTRY

Every user with Internet access has the opportunity to play Quasar Metaverse NFT. You don't need to buy an expensive computer. All you need is a browser and a stable internet connection. This way you can earn money from anywhere in the world. Within the framework of the Quasar project, there are a huge number of objects and captain cards that complement each other and contribute to the creation of a rich and complete product. The plot and visual content of the game world are combined into a single puzzle and connected together, creating a world with a variety of characters and interesting game dynamics.
7. Gameplay of QUASAR Metaverse

Quasar Metaverse principle can be found in the Monopoly board game. To start the game, the gamer must pay an entry fee with Quasar coins. Before the start of the game session, the player can choose a captain from those that he has. After the start of the game session, each player gets teleports on to one of the 500 objects of the playing field and receives 100,000 in-game currency Quasar Cash. For each turn, the player is given 20 seconds to make any decisions: renting or improving objects, interacting with other players or interacting with unique objects that may be interesting to the player.
Players receive income for one turn and randomly move to another place on the playing field, if they appear:

- on a free object, they can rent it
- on the object is already owned by someone, player will need to pay a fine
- on a neutral object interaction will depend on its properties.

The game will end after all players except one become bankrupt or after 60 minutes. The winners will be those who did not go bankrupt and earned the most Quasar Cash. The prize fund is distributed to the first 5 places in different shares, respectively.
Quasar Metaverse offers its users a game universe consisting of 500 cells, each of which contains space objects differing in types and properties that affect the course of the game session and the state of the player. The cell contains the following information:

- the quality of the object, it’s displayed in different color
- the level of improvement by three elements at the bottom of the cell
- it’s belonging to the player the player's avatar

At the beginning of each game session, the cells are semi-transparent until they are visited by players. When any player finds himself on a new cell, it becomes 100% color.
The player’s ship is a picture that marks his current location on the game board. In future versions of the game, the ship will have an impact on the game balance and give the player additional abilities.

THE PROFIT FROM THE RENTED OBJECTS Goes to the player's account every turn and increases at the next level of improvements.
Also, these objects bring profit to the owner in the form of rent, which is withdrawn from other players who finds themselves on this object.

IMPROVEMENTS to leased facilities are possible up to 3 level.
To buy an upgrade, the player must own certain game resources.
If you buy an upgrade all your objects that are on the same level will improved at once.
EXCHANGE OF THE OBJECTS BETWEEN PLAYERS is available during the game session. Players can sell the lease right to any of their objects at market value. Other players can buy the right to the object on the principle of who is the first. When you transfer an object to another player, it is transferred along with all the improvements and begins to make a profit from the next turn.

OBJECTS LIKE NFT cards can be purchased on the Quasar Metaverse marketplace by any users. It is from these users that players "rent" objects during the game session. The owner of the NFT object receives a profit for it in the gaming session.
TYPE OF OBJECTS

- NEUTRAL
  5% of the field

- COMMON
  55% of the field

- RARE
  25% of the field

- EPIC
  10% of the field

- LEGENDARY
  5% of the field
OBJECTS OF THE NEUTRAL TYPE
There are three different objects of the Neutral type, each of which applies a unique effect to the player who gets on it.

Prison - detains the player's ship on its cell. You can get out of prison on the next turn if you pay Quasar Cash, each prison level has its own exit cost.

Abandoned station - when first visited by any player, it gives that player some Quasar Cash. To pick up Quasar Cash, the player must press the action button on his panel. Repeated and subsequent hits of any players do not bring Quasar Cash.

Wormhole - automatically transfers the ship that got into it to any cell of the gaming field that is not occupied and not owned by another player.
CAPTAIN'S CARDS give the player the opportunity to use additional abilities during the game session, which can significantly affect the course of the game. During the preparation for the game, the user can choose one card from those that he has. He will be able to use the selected card during the game. Each card has cooldown:

- time in moves (CD)
- useable ability that is unique to each card
- all application costs are in Quasar Cash

Cards can be bought and sold in the gaming marketplace.

THE GOAL

During the game session every player’s goal is to create their own trading corporation and earn the most Quasar Cash.

The leaderboard displays players according to their income of the players. The player with the largest amount on the account is on the first place, etc. To get a prize for your place you need to be online.

AFK: If the player has not performed any actions on the current spot, then he simply goes to the next cell. If connection to the game is bad, then the player's ship continues to move through the cells until player reconnects to the session after that he can continue the game.
BALANCE AND ECONOMICS

Bank of gaming session in the amount of 120 Quasar Tokens consists of 12 players that has paid a fee of 10 Quasar Tokens.

The bank is distributed as follows:
- 100 Quasar Tokens is a prize pool for players
- 8 Quasar Tokens is a payment for the gaming session of Quasar Metaverse another
- 8 Quasar Tokens is a commission for NFT card holders and the last
- 4 Quasar Tokens will be burned

The winnings are split between the players as follows:
- 1st place - 55 Quasar Token
- 2nd place - 24 Quasar Token
- 3rd place - 12 Quasar Token
- 4th place - 6 Quasar Token
- 5th place - 3 Quasar Token
The commission is distributed among the holders of NFT cards as follows - 8 Quasar Tokens which are the winnings:

- 40% of which are received by Legendary cardholders
- 30% are received by Epic cardholders
- 20% are received by Rare card holders and the final
- 10% are received by Common cardholders

The commission is received by the owners of the objects that were purchased by the players during the current game session.

Profitability of objects on playing field by rarity:

- Common - 0.0363636
- Rare - 0.16
- Epic - 0.6
- Legendary - 1.6
The basic sale block from the developers is available to Quasar Metaverse users on the marketplace at a fixed price for every type of product: captain's cards and game board objects.

The amount of products on the basic sale is limited. After purchasing users can freely trade cards on the marketplace between each other and until a new product from the developer appears basic sale block is hidden.

When buying, the player receives one available random card. Purchased cards are the property of the player.
The user part of the marketplace is divided in two parts.

The first part contains the current products on sale. In the second part, the player can put up his objects for sale.

There are no restrictions on the price for the sold NFT cards, the seller sets it. If the card is put up for sale on the market, it can not make you profit and be selected for a gaming session.
8. Tokenomics

All economic processes in Quasar Metaverse uses the Quasar utility token (QSR), with an issue volume of 100,000,000 QSR. Token price is 0.10$ on the public sale. Seed price is discount - 30% = 0.07$.
• Seed  4% / TGE 20% / then 20% linearly
• Private1  4% / TGE 10% / cliff 2 months / then 6% monthly
• Private2  4% / TGE 10% / cliff 2 months / then 6% monthly
• Public  2% / TGE 20% / then 20% linearly
• Team  13% / 100% cliff 12 month / then 4.16% monthly
• Advisors  7% / 100% cliff 6 month / then 5.5% monthly
• Game farming & mining 18% / Cliff 1 month / then 2.9% monthly
• Liquidity 15% / TGE 20% / then 3 month 3% / then 5% monthly
• Marketing 10% / TGE 10% / cliff 3 month / then 10% every 3 month
• Treasure & reserve 5% / Cliff 12 month / then 20% every 3 month
• Game Reward 18% / TGE 20% / Cliff 1 month / then 2.9% monthly
The Quasar Utility Token is the most important part of the Quasar Metaverse economy. QSR allows to provide Quasar Metaverse users with benefits and rewards for participation and loyalty.

For a certain amount of QSR player can join a gaming session, buy assets and improvements to save up and raise his capital. The Governance function allows the holders of the Quasar Token to participate in the fundamental voting process of the project, as well as influencing the scenario of development of the game. For example, you can vote for a decrease in the percentage of QSR burning, an increase in the cost of one gaming session or release of new NFT or new game universes.

IGO and GameFi tools let you fulfill the potential of the Quasar Token.
9. Road Map

- Game presentation
- Our website
- Token sale
- NFT sale
- MVP

- New exciting universes
- New Captains
- NFT Marketplace
- Achievements and titles
- Improvement of space objects
- Different game modes system
- App for phone

- New types of special objects
- New ships improvements
- Player ratings
- NFT Farming system
- Token staking

- Development of Quasar Version 2
- Intergalactic tavern
- Once again more new universes!
- New unbelievable game modes

- PVP mode
- Ability to rob and seize other player's property
- And some more new universes
- Unlimited gaming sessions
- Ingame token and NFT staking
- You'll be able to place bets on the winners
